## Message

At the time of Independence in 1947, Indian agriculture was stagnant in every respect. The immediate task of the Indian government in the post-Independence period was, therefore, to initiate growth process in agriculture on modern lines. The process of planned development in the field of agriculture began with the launching of successive Five Year Plans. Notable development has occurred over the years, more specifically in the past one year. The Government has identified horticultural crops as a means of diversification for making agriculture more profitable by efficient soil management through 'Soil Health Card' Scheme, efficient land and water use through 'Per Drop More Crop' Scheme and creating skilled employment for rural masses. Recent efforts have been rewarding in terms of opening new vistas for farmers' welfare through 'e-Kisan Mandi' portal and easing export of value added horticultural products.

As we move away from an economy of scarcity to an economy of plenty, there is a call for knowing the present status as well as future scope of horticulture sector. For strategic planning and exploitation of vast opportunities, timely availability of reliable data is a fundamental requirement. For the first time, the Department of Agriculture, Cooperation & Farmers Welfare (DAC&FW) has taken the initiative to publish all the information related to horticultural crops in the form of a book, which is a laudable effort. I consider the publication, *Horticultural Statistics at a Glance 2015*, as an extremely valuable initiative taken by the DAC&FW. This book presents a comprehensive information of the horticulture sector with many new features.

I congratulate the Horticulture Statistics Division team that has painstakingly produced this book and sincerely hope that it proves to be an effective compilation for administrators, policymakers, researchers and farmers in implementing various policies and programmes in the country.

## Message

In the Indian spectrum of horticulture, the database of horticultural crops is generally weak and lacking in authenticated information on area, production and productivity of various horticultural crops. In order to assure appropriate returns to farmers and to strengthen nutritional security, it is imperative to collect end-to-end information covering pre-production, production, post-harvest management, processing and marketing of horticultural produce. Generation and dissemination of quality data can also help in averting frequent situations of excesses or shortages and exploitation of such situations by the middlemen and speculators.

So far, the government has been disseminating horticultural data up to the state level. I am happy that for ensuring the timely availability of relevant and latest data of horticultural crops at sub-national level, a web-enabled, workflow-based system, namely, Horticulture Area Production Information System (HAPIS) has been introduced by the Horticulture Statistics Division of Department of Agriculture, Cooperation & Farmers Welfare (DAC&FW). The system provides online interface enabling data-flow from districts to states and thereon to the centre. The Horticulture Statistics Division, therefore, in making its first attempt by publishing all the horticulture-related national-, state- and district-level data in this book, *Horticultural Statistics at a Glance 2015*.

In order to constitute critical inputs for formulation of policies and programme at the grassroots level, the Horticulture Statistics Division of DAC&FW will meet a long-felt demand of information by publishing the vast information ranging from productivity to expenditure incurred under horticulture schemes as well as data on prices and international trade of horticulture commodities.

I would like to record my sincere thanks to all the officers of the Horticulture Statistics Division for bringing out the first edition of this publication in record time. I look forward to the comments of all users of this publication which would help us in adding value to its subsequent edition.

Date: 24 October 2015

## Preface

Though India has emerged as a major producer of horticultural crops and the share of horticulture in the economy has been increasing, there is still a lot of scope in harnessing the potential of this sector. The Department of Agriculture, Cooperation & Farmers Welfare (DAC&FW) is the nodal department for overviewing horticultural development in the country. It implements the programmes through the horticulture departments in all the states and provides the leadership to coordinate actives for the promotion of horticulture. Since efficient implementation of programmes and polices call for detailed information in time, one of the key areas to be looked into is developing a robust system of collection of horticultural statistics.

The Horticulture Statistics Division has been collecting and compiling the horticultural data relating to area and production in respect of major horticultural crops for past several years. However, this data was earlier being published in the book, *Indian Horticulture Database*, by National Horticulture Board (NHB). For the first time, a publication on horticultural statistics is being brought out by DAC&FW. I express my deep gratitude to Shri Siraj Hussain, Secretary, DAC&FW for his initiative, support and guidance in publishing this book.

I am grateful to the Horticulture Commissioner, Dr S.K. Malhotra, who has contributed a lot by way of giving technical information, which has been included as tables in this publication. My grateful thanks are due to Shri Raghvendra Singh, Addl. Secretary, and Shri Sanjeev Chopra, Joint Secretary, Mission for Integrated Development of Horticulture (MIDH), whose constant encouragement and active support helped to get this whole document compiled. I applaud the efforts of my team in Horticulture Statistics Division: without their untiring efforts, this voluminous database could not have been compiled. I hope this book would be of immense use to the scientific and horticultural community as well as the policymakers.

5.3.3	State-wise Assistance Sanctioned for Marketing Infrastructure Projects under NHM Scheme	115
5.3.4	State-wise Assistance Sanctioned for Marketing Infrastructure Projects under HMNEH Scheme	116
5.3.5	State-wise Distribution of Cold Storages as on 31 March 2014	119
<b>6.</b>	<b>General Agricultural Information</b>	<b>121</b>
6.1	Main Agro-climatic Regions/Zones of India	122
6.2	Land Use Classification in India	123
6.3	Area under Broad Soil Groups in India	125
6.4	Average Size of Holdings by Different Size Classes	126
6.5	State-wise Distribution of Number of Operational Holdings and Area Operated, All Social Groups	127
6.6	All-India Rainfall Distribution	132
6.7	Source-wise Irrigated Area	134
6.8	State-wise Net Area Irrigated by Source, 2011-12	135
6.9	Distribution of Land Use, Number and Area of Holdings in India by Irrigation Status and Size Classes for All Social Groups as per Agriculture Census, 2010-11	138
6.10	All-India Cultivated and Irrigated Area—Gross and Net along with Cropping Intensity	140
6.11	Cropping Pattern According to Land Utilization 2010-11 and 2011-12	142
6.12	Forest Cover in States/UTs in India, 2013	144

<b>7. Area, Production and Yield of Horticultural Crops</b>	<b>146</b>
<b>7.1 Time Series of All-India Area, Production and Yield for Major Horticultural Crops</b>	<b>146</b>
7.1.1 All-India Area, Production and Productivity of Lime/Lemon, Orange and Mosambi	147
7.1.2 All-India Area, Production and Productivity of Apple, Banana and Grapes	148
7.1.3 All-India Area, Production and Productivity of Guava, Litchi and Mango	149
7.1.4 All-India Area, Production and Productivity of Papaya, Pineapple and Sapota	150
7.1.5 All-India Area, Production and Productivity of Brinjal, Cabbage and Cauliflower	151
7.1.6 All-India Area, Production and Productivity of Okra, Onion and Peas	152
7.1.7 All-India Area, Production and Productivity of Tomato, Potato and Sweet Potato	153
7.1.8 All-India Area, Production and Productivity of Tapioca, Areca Nut and Cashew Nut	154
7.1.9 All-India Area, Production and Productivity of Coconut and Spices	155
<b>7.2 State-wise Summary</b>	<b>156</b>
7.2.1 State-wise Area and Production of Horticultural Crops for 2014-15 (Provisional)	157
7.2.2 State-wise Area and Production of Fruit Crops, 2012-13 to 2014-15	160
7.2.3 State-wise Area and Production of Vegetable Crops, 2012-13 to 2014-15	162
7.2.4 State-wise Area and Production of Plantation Crops, 2012-13 to 2014-15	164
7.2.5 State-wise Area and Production of Spice Crops, 2012-13 to 2014-15	166
7.2.6 State-wise Area and Production of Flowers (Loose), 2012-13 to 2014-15	168
7.2.7 State-wise Area and Production of Aromatics & Medicinal Plants, 2012-13 to 2014-15	170
7.2.8 Production & Share of Leading Fruit-producing States, 2013-14	171
7.2.9 Production & Share of Leading Fruit-producing States: Graph	171

7.2.10	Production & Share of Leading Vegetable-producing States, 2013-14	172
7.2.11	Production & Share of Leading Vegetable-producing States: Graph	172
7.2.12	Production & Share of Leading Plantation-producing States, 2013-14	173
7.2.13	Production & Share of Leading Plantation-producing States: Graph	173
7.2.14	Production & Share of Leading Flower-producing States, 2013-14	174
7.2.15	Production & Share of Leading Flower-producing States: Graph	174
7.2.16	Production & Share of Leading Spices-producing States, 2013-14	175
7.2.17	Production & Share of Leading Spices-producing States: Graph	175
<b>7.3</b>	<b>State-wise Area and Production for Individual Horticultural Crops</b>	<b>176</b>
7.3.1	State-wise Area and Production of Almonds	177
7.3.2	State-wise Area and Production of Amla (Aonla)	177
7.3.3	State-wise Area and Production of Apple	178
7.3.4	State-wise Area and Production of Banana	179
7.3.5	State-wise Area and Production of Lime/Lemon	181
7.3.6	State-wise Area and Production of Mandarin	182
7.3.7	State-wise Area and Production of Sweet Orange	183
7.3.8	State-wise Area and Production of Grapes	184
7.3.9	State-wise Area and Production of Guava	185
7.3.10	State-wise Area and Production of Mango	186
7.3.11	State-wise Area and Production of Papaya	188
7.3.12	State-wise Area and Production of Pineapple	189
7.3.13	State-wise Area and Production of Pomegranate	190
7.3.14	State-wise Area and Production of Sapota	191
7.3.15	State-wise Area and Production of Strawberry	192
7.3.16	State-wise Area and Production of Walnut	192
7.3.17	State-wise Area and Production of Beans	193
7.3.18	State-wise Area and Production of Bottlegourd	194
7.3.19	State-wise Area and Production of Brinjal	195
7.3.20	State-wise Area and Production of Cabbage	197

## 1

## Methodology for Estimation of Horticultural Crops

Fruits and vegetables account for nearly 90% of the total horticulture production in the country. India is now the second largest producer of fruits and vegetables in the world and is the leader in several horticultural crops, namely mango, banana, papaya, cashew nut, areca nut, potato, and okra (lady's finger). However, the nature of horticultural crops is such that it is not easy to make assessment of their production. These crops, especially vegetables, are grown in small plots, fields, or in the back of the houses, and they do not have single point of harvesting in most of the cases which makes their assessment difficult. Many horticultural crops have multiple pickings in a single season. Similarly, many fruit trees are scattered, which do not count for assessment.

In view of above difficulties several research studies were taken up by agricultural scientists in the past. Then, a central plan scheme called the Crop Estimation Survey of Fruits and Vegetables (CES-F&V)—a component of Improvement of Agricultural Statistics Scheme—was implemented by the Directorate of Economics & Statistics (DES) of the Ministry of Agriculture and Farmers Welfare (MoA&FW). The scheme envisaged the generation of area and productivity estimates using sampling and estimation methodology evolved by Indian Agricultural Statistics Research Institute (IASRI). The scheme was implemented in 11 states (Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Karnataka, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh) covering selected crops: seven fruit crops (apple, mango, citrus, pineapple, grapes, banana and guava)

and seven vegetable crops (potato, cabbage, cauliflower, onion, tomato, ginger and turmeric). The scheme was initiated in 1982-83 and was implemented by central funding through the Department of Agriculture, Cooperation & Farmers Welfare (DAC&FW). However, the scheme was fraught with some problems which were noted by the National Statistical Commission (NSC) which recommended that:

- The methodology adopted in the pilot scheme of CES-F&V should be reviewed and an alternative methodology for estimating the production of horticultural crops should be developed taking into account information flowing from all sources including market arrivals, and exports and growers associations.
- Special studies required to establish the feasibility of such a methodology should be taken up by a team comprising representatives from IASRI, DES of MoA&FW, Field Operations Division of National Sample Survey Office (NSSO(FOD)) and from one or two major states growing horticultural crops.
- The alternative methodology should be tried out on a pilot basis before actually implementing it on a large scale.

Accordingly, the earlier scheme, which is CES-F&V, has been discontinued from the year 2013-14. A new alternative methodology has been developed by IASRI which is much simpler and easy to implement. As per the recommendations of NSC, this new alternative methodology is now being tried out on pilot basis in six states under the project called the Coordinated Programme on Horticulture Assessment and Management using Geoinformatics (CHAMAN) of the DAC&FW.

### Coordinated Programme on Horticulture Assessment and Management Using Geoinformatics (CHAMAN)

The DAC&FW, MoA&FW, under the Mission for Integrated Development of Horticulture (MIDH), has launched a project called CHAMAN. The programme has the objective to develop and firm up scientific methodology for estimation of area and production under horticultural crops. It has two main components, namely: (1) remote sensing (RS) technology and (2) sample survey (SS) methodology for estimation of area and production of horticultural crops.

#### *1. Remote Sensing: Proposed Programme and Its Objectives*

The programme is being implemented by Mahalanobis National Crop Forecast Centre (MNCFC) and will have following components:

1. Area and production assessment of seven major horticultural crops in major states

2. Remote sensing for **developmental studies** like site suitability and post-harvest infrastructure development
3. **Detailed scientific field-level research studies** for developing technology for crop identification, yield modelling and disease assessment for other horticultural crops.

### 1.1 AREA ASSESSMENT

Area assessment will be carried out for the selected crops in the selected districts of major states. The crops will be selected based on the production share, as mentioned in section 1. Accordingly, following crops and study area are being proposed. Satellite data to be used are either of LISS III (23.5 m resolution) or LISS IV, depending upon the spatial extent of the crop. In the absence of availability of Indian satellite data during the crop growth, foreign satellite data will also be explored.

Crop Type	Crop	State (Districts)
Fruit	Banana	Tamil Nadu, Andhra Pradesh, Maharashtra, Gujarat, Karnataka
	Mango	Uttar Pradesh, Gujarat, Karnataka, Andhra Pradesh, Bihar
	Citrus	Andhra Pradesh, Maharashtra, Punjab, Madhya Pradesh, Gujarat
Vegetables	Potato	Uttar Pradesh, Bihar, West Bengal, Gujarat, Punjab
	Onion	Maharashtra, Gujarat, Madhya Pradesh, Karnataka, Bihar
	Tomato	Andhra Pradesh, Odisha, Karnataka, Madhya Pradesh, West Bengal, Bihar
Spices	Chilli	Andhra Pradesh, Karnataka, West Bengal, Madhya Pradesh, Odisha

### 1.2 PRODUCTION ASSESSMENT

For production forecasting, yield modelling has to be carried out. India Meteorological Department (IMD), under the Forecasting Agricultural output using Space, Agro-meteorology and Land-based observations (FASAL) project, develops district-level, empirical agro-meteorological yield models for different crops. Similar procedures will be followed for yield forecasting of vegetable crops. The funding support for yield forecasts by IMD will continue to be under FASAL project.

### 1.3 HORTICULTURAL DEVELOPMENT STUDIES

The horticultural development studies can be grouped into following categories:

- (a) Site suitability
- (b) Post-harvest infrastructure

- (c) Crop intensification
- (d) Geographic information system (GIS) database creation
- (e) Orchard rejuvenation
- (f) Aqua-horticulture

These may be used for:

- (a) Site suitability: For introduction/expansion of important horticultural crops, for example, scope of replicating the village-level horticulture plans developed for North-Eastern states in various states.
- (b) Post-harvest infrastructure: GIS and RS will be used to assess the need and find the optimum locations for infrastructures such as cold chains, markets, etc.
- (c) Crop intensification: In areas where cropping intensity is low and regions of unutilized/underutilized, short-duration horticultural crops can be incorporated into the crop rotation. This will also link with watershed and wasteland development programmes of the Government of India.
- (d) GIS database creation: The GIS database will include the inputs required managing the horticultural crops such as soils, weather, infrastructure (such as markets). This will help in better income generation for the farmers, especially in tribal and remote areas.
- (e) Orchard rejuvenation: This would aid in identifying the plantations/orchards that need rejuvenation and assess the shifting of orchard areas especially of apple (Himachal Pradesh), mango (Malda), orange (Darjeeling) and citrus fruits (Arunachal Pradesh).
- (f) Aqua-horticulture: Wetland maps have been created at 1:50,000 scale for the entire country using satellite data. Various horticultural crops (such as makhana, or fox nut) are grown in wetlands. A GIS database will be created for selected sites to understand the ecology and economics of these crops so that these can be replicated.

#### 1.4 RESEARCH STUDIES

Crop discrimination within vegetable crops, yield modelling and stress detection (disease and nutrient) are still research issues. It is proposed that, 2–3 sites of major vegetable-growing areas (for example, Malerkotla in Punjab, Gurgaon, Salt Lake Area in Kolkata, etc.) will be chosen, where multi-level (ground, airborne, satellite-based) RS data will be collected. The analysis will result in improving the understanding towards better RS applications for horticulture.

#### 1.5 IMPLEMENTATION PLAN

1. First Year (2014-15): Pilot and scientific studies along with onion and potato estimation

2. Second Year (2015-16): Estimation of seven major crops in all states in pilot mode, developmental and research studies
3. Third Year (2016-17): Estimation of seven major crops in all states in operational mode, developmental and research studies continued

## *2. Estimation of Area and Production of Main Horticultural Crops Using Sample Survey Techniques*

This component is being implemented by the IASRI as a “study to test the developed alternative methodology for estimation of area and production of horticultural crops”. The study will be taken up in eight states, namely Maharashtra, Andhra Pradesh, Karnataka, Tamil Nadu, Gujarat, Madhya Pradesh, Haryana and Himachal Pradesh. In each of the states, about 40% districts out of the total number of districts, covering about 70–80% of the total area under fruits and vegetables in the entire state, and two districts out of the remaining districts, covering about 20–30% of the total area under fruits and vegetables in the entire state, will be undertaken for the study.

### 2.1 OBJECTIVES OF THE STUDY

The objectives of the study are to:

- (a) test the developed alternative methodology for **estimation of acreage under each major fruit and vegetable crops**;
- (b) test the developed alternative methodology for **estimation of yield rates and total production of major fruit and vegetable crops grown in the state**; and
- (c) **validate the accuracy of estimates of area under major fruits and vegetables using RS techniques with the area estimates using complete enumeration.**

### 2.2 PROPOSED SAMPLING DESIGN

The sampling design to be adopted for the survey will be stratified multistage random sampling.

- First of all, important districts are to be identified for conducting survey on the basis of district-wise area figures for fruits and vegetables of the state. The identified districts, that is, more productive districts covering about 70–80% of the total area for fruits and vegetables in the entire state to be treated as one stratum and rest of the districts, that is, less productive districts to form another stratum. From stratum one, about 40% districts out of the total number of districts and two districts from stratum two will be selected by simple random sampling without replacement (SRSWOR).

- Taluk/tehsil-wise area figures under fruits and vegetables will be used for sub-stratifying the taluks/tehsils of the more productive districts into two groups—more productive taluks/tehsils and less productive taluks/tehsils. More productive taluks/tehsils are those which constitute 60–70% of the total area under fruits and vegetables of the district and rest of the taluks/tehsils fall under less productive taluks/tehsils.
- A sample of two taluks/tehsils will be selected by SRSWOR from both the groups after rejecting taluks/tehsils contributing less than 5% of total area under fruits and vegetables of the district. From each of the four selected taluks/tehsils, a sample of 20 villages will be selected by SRSWOR. The selected villages will be completely enumerated so as to record the number of orchards under different fruits and the cropping pattern with respect to vegetables. For the selection process, an orchard should have minimum of 12 fruit trees of bearing age, of a single fruit crop.
- For fruits survey, a sample of five orchards will be selected from each selected village by SRSWOR. In case there are more than one fruit crop available in the village then orchards of two major fruits will be selected in proportion to the number of orchards for two major fruit crops in each of the village with a minimum of two orchards for each fruit crop. Major fruit crops to be decided on the basis of number of orchards of different fruits available in the village. From each selected orchard, a sample of three clusters each consisting of four trees of bearing age will be selected randomly out of the total number of trees of bearing age. The yield of selected trees will be collected through enquiry and yield of any four trees will be collected through physical observation.
- For vegetable survey, a sample of 10 vegetable growers will be selected out of qualified vegetable growers of a village. For this, after complete enumeration of selected village, a list of qualified vegetable growers will be prepared. Qualified growers are those vegetable growers who have gross cropped area of 0.1 ha and above under vegetables in case of a plain state and 0.01 ha and above in case of hilly state. Ranking of qualified vegetable growers will be done as per gross cropped area and then qualified vegetable growers will be divided into two groups after ranking. If number of growers will be odd, the first group will have one more grower than the second group. A total of six vegetable growers will be selected from the first group and rest four from the second group. In case total number of qualified vegetable growers in any village is less than or equal to 10, all the growers will be selected for detailed survey enquiry. The produce of all the vegetables crops grown by the selected vegetable grower will be recorded through enquiry and physical observation will be taken on the day of visit.

The field investigator (FI) will be advised to get in touch with the grower of the selected field from time to time and ascertain the date of harvest. He must be present on the day of harvest. He must locate the experimental plot of specified size ( $5\text{ m} \times 5\text{ m}$ ) before the cultivator starts harvesting the field. In each selected field, the experimental plot of the specified size must be located at random beginning with south-west corner of the selected field.

- An attempt will also be made to explore the possibility of utilizing personal digital assistant (PDAs)/handsets for collection/uploading of data in one district in each of the six states proposed under study.

### 2.3 PROPOSED ESTIMATION PROCEDURE

In case of fruits, the developed estimation procedures for estimating area, number of bearing trees, number of stray bearing trees, average yield per tree and production of fruits at district level will be followed in the present study. In the case of vegetables also, the developed estimation procedures for estimating area, production and productivity of vegetables at the district level will be followed. The district-wise market arrival data for each of the states under study for the last 10–15 years for important fruits and vegetables under the study will be acquired from respective state's Agricultural Marketing Board. The district-wise data for the last 10–15 years pertaining to area, production and productivity of important fruits and vegetables in the states will be acquired from the respective state departments. The estimates for non-surveyed districts will be obtained using market arrival data. Separate suitable models will be developed using market arrival data and production data for the last 10–15 years for the non-surveyed districts of both the strata, namely more productive and less productive districts. The district-level estimates of non-surveyed districts of both the strata will be obtained using these developed models. The state-level estimates will be obtained as per the proposed sampling design.

### 2.4 IMPLEMENTATION PLAN

Broadly the implementation plan of IASRI is as under:

1. 2014-15: Initial preparatory works by IASRI and states for the survey
2. 2015-16: Conduct of the fieldwork in all the eight states for area and production assessment
3. 2016-17: Fieldwork to be continued, validation and analysis of data collected and submission of report

This study would be complete by 2016-17.

# 2

## Overview

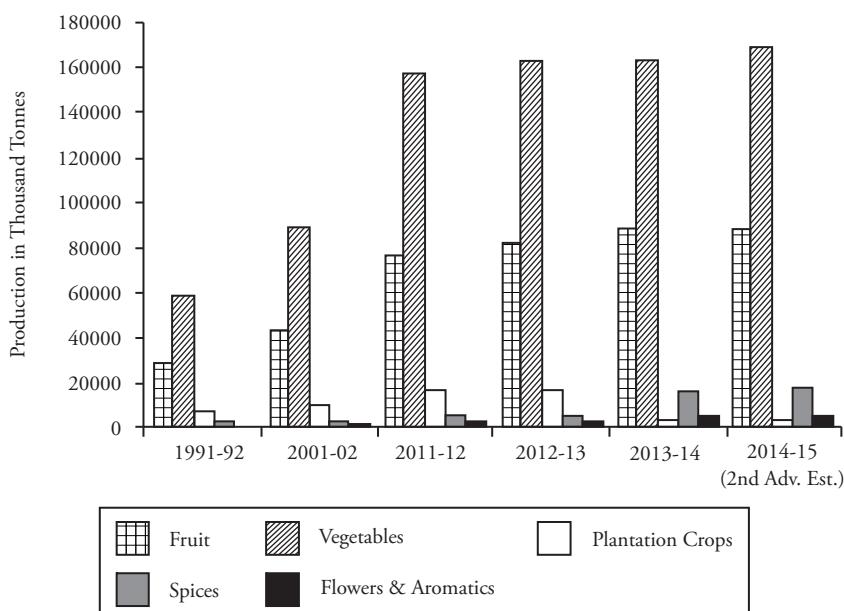

The need for diversification to horticulture sector was acknowledged by the Government of India in the mid-1980s by focusing its attention on investment in this sector. Presently horticulture has established its credibility in improving income through increased productivity, generating employment and in enhancing exports. Resultantly, horticulture has moved from rural confines to becoming a commercial venture.

The Department of Agriculture, Cooperation & Farmers Welfare (DAC&FW) of the Ministry of Agriculture & Farmers Welfare (MoA&FW) is the nodal department for overviewing horticulture development in the country. It implements different programmes through the Departments of Horticulture in all the states and provides the leadership to coordinate activities for the promotion of horticulture. However, efficient implementation of programme and policies call for robust information in time. In this backdrop, this book presents the overall information on horticulture, focusing on area, production and yield estimates apart from the information about price, market arrivals and export.

The scenario of horticultural crops in India has become very encouraging. The percentage share of horticulture output in agriculture has become more than 30%. Under the purview of agriculture and allied activities, the share of plan outlay for horticulture which was 3.9% during Ninth Five Year Plan, has increased to 4.6% during the Twelfth Plan.

## Production

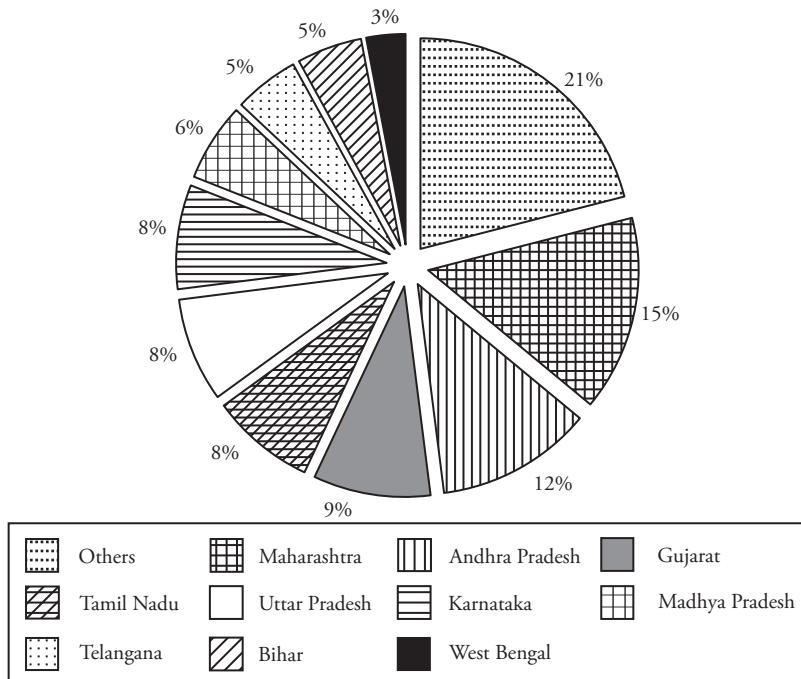

India has witnessed voluminous increase in horticulture production over the last few years. Significant progress has been made in area expansion resulting in higher production. Over the last decade, the area under horticulture grew by about 2.7% per annum and annual production increased by 7.0%. During 2013-14, the production of horticultural crops was about 283.5 million tonnes from an area of 24.2 million hectares (ha) (see Table 2.10). Out of the six categories, that is, fruits, vegetables, flowers, aromatic, spices and plantation crops, the highest annual growth of 9.5% is seen in fruit production during 2013-14 (see Table 2.12). The production of vegetables has increased from 58,532 thousand tonnes to 168,300 thousand tonnes since 1991-92 to 2014-15 (2nd advance estimates) as depicted in Figure 2.1.

**Figure 2.1** Production of Various Horticultural Crops over the Years: Graph

Source: Based on the data of Table 2.10.

The annual growth in citrus fruits is quite high (10.48%) during 2013-14. This fruit has been contributing 12–13% of total fruit production over the last few years (see Table 2.11). As indicated in the later part (see Table 7.2.2), in 2013-14, the total fruit production was highest in the case of Maharashtra (134.6 lakh tonnes) followed by Andhra Pradesh (105.11 lakh tonnes) may be seen from Figure 2.2.

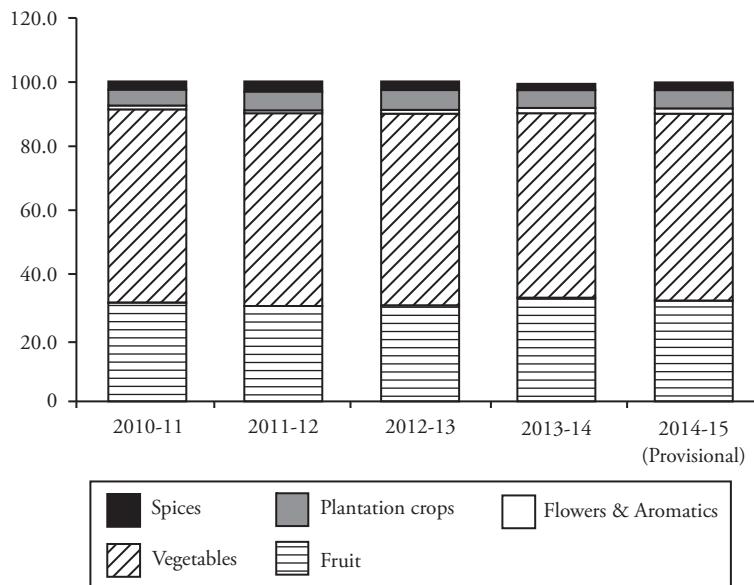

**Figure 2.2** Leading Fruit-producing States of 2013-14: Graph

Source: Based on the data of Table 7.2.8.

Apart from the health improvements, the production of vegetables improves the economy of a country as these are very good source of income and employment. The contribution of vegetables remains highest (59–61%) in horticulture crop productions over the last five years as shown in Figure 2.3.

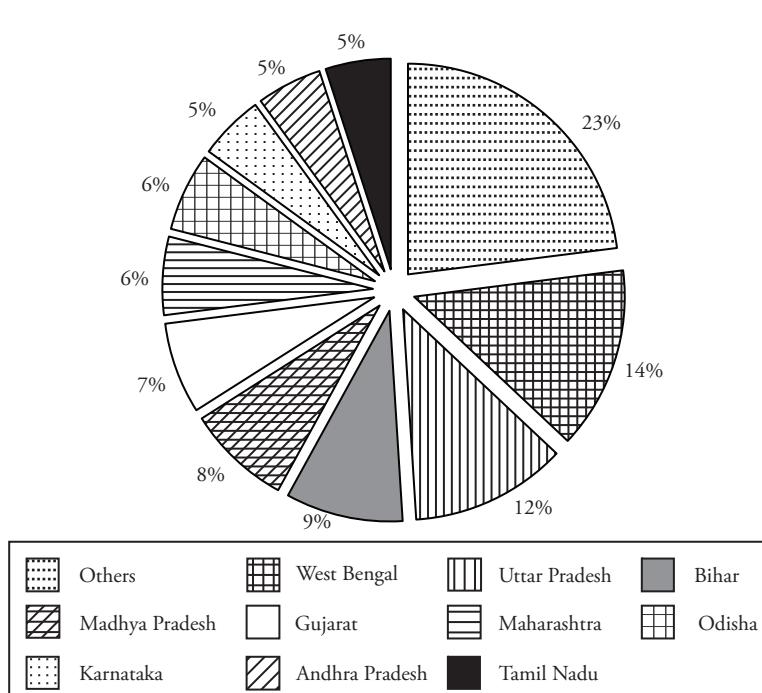

During 2013-14, the area under vegetables is estimated at 9.4 million ha with a production of 162.9 million tonnes in India (see Table 2.10). For this period the total vegetable production was highest in case of West Bengal (23,045 thousand tonnes) followed by Uttar Pradesh (18,545 thousand tonnes) (see Table 7.2.3). The graphical representation of production share of leading vegetable-producing states of 2013-14 is shown in Figure 2.4.

Great potentialities exist for cultivation of flowering plants. Increasing trends in area and production of flowers has been observed since 2003-04 (see Table 2.10). In addition to the beautification of the local landscape, great scope exists for export of flowers; and floriculture is important for bee-keeping industry which too provides an alternate source of income to the Indian farmers. The highest production of flowers (loose) was recorded in Tamil Nadu (343.65 thousand tonnes) followed by Karnataka (211.50 thousand tonnes) (see Table 7.2.6). The graphical representation of the leading flower-producing states of 2013-14 is shown at Figure 2.5.

**Figure 2.5** Leading Flower-producing States of 2013-14: Graph

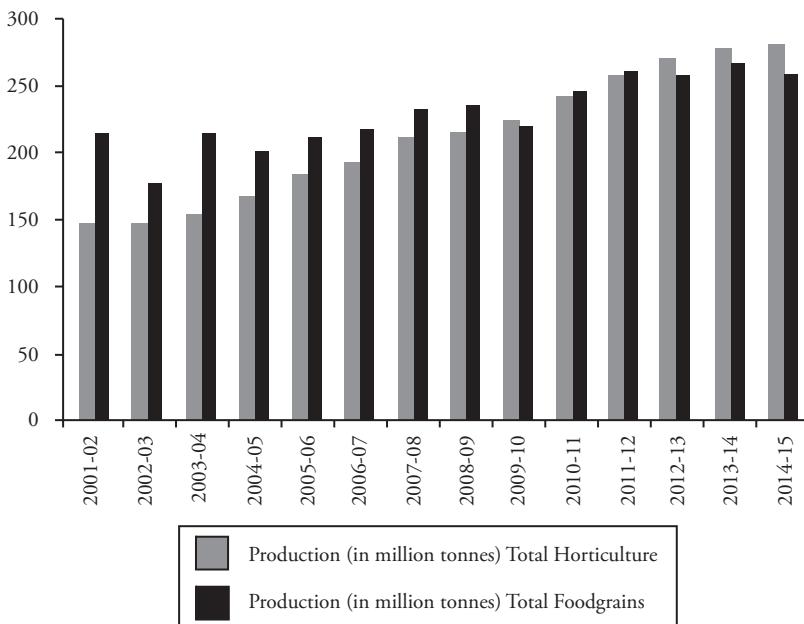

Source: Based on the data of Table 7.2.14.

India witnessed the shift in area from foodgrains towards horticultural crops over last five years (2010-11 to 2014-15). The area under horticultural crops has been increased about 18% but expansion of area under foodgrains is only 5% during the stipulated period. The production of horticultural crops has outpaced the production of foodgrains since 2012-13 as can be seen in Figure 2.6.

### Prices and Arrivals

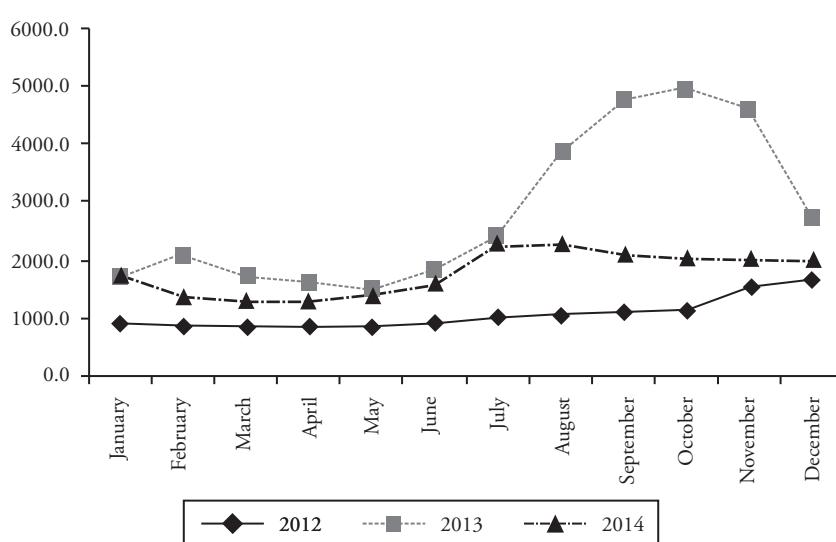

Prices of agricultural commodities fluctuate in accordance with their supply and demand situation which, in turn, is characterized by seasonality of production and marketing. Horticulture commodities are produced seasonally and are perishable. On account of these characteristics, such commodities register fluctuation of prices from month to month. These fluctuations ultimately affect the return to the growers (see Tables 8.1 to 8.3). The monthly trends of all-India average monthly wholesale prices for onion, potato and tomato are shown in Figures 2.7 to 2.9.

The trends in state-wise monthly prices (wholesale and retail) and arrivals in regard to important crops, such as potato, onion and tomato, show that

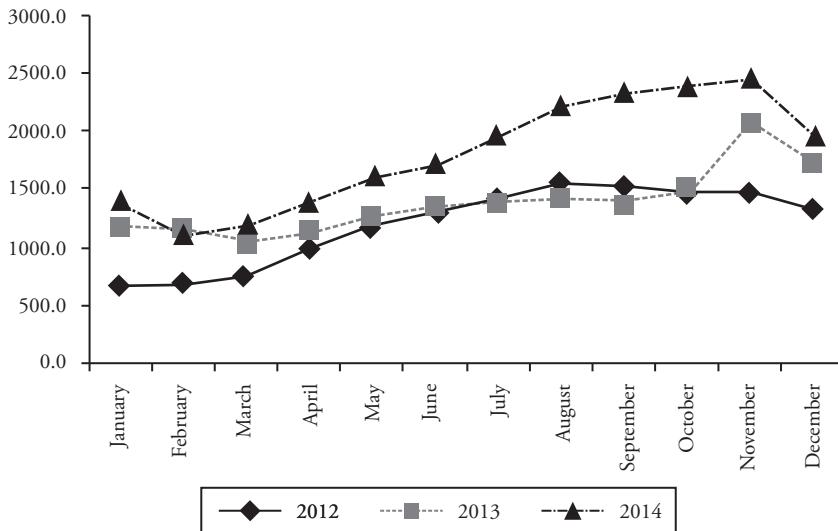

**Figure 2.6** Production of Horticulture vis-à-vis Foodgrains: Graph

Source: Based on the data of Table 2.14.

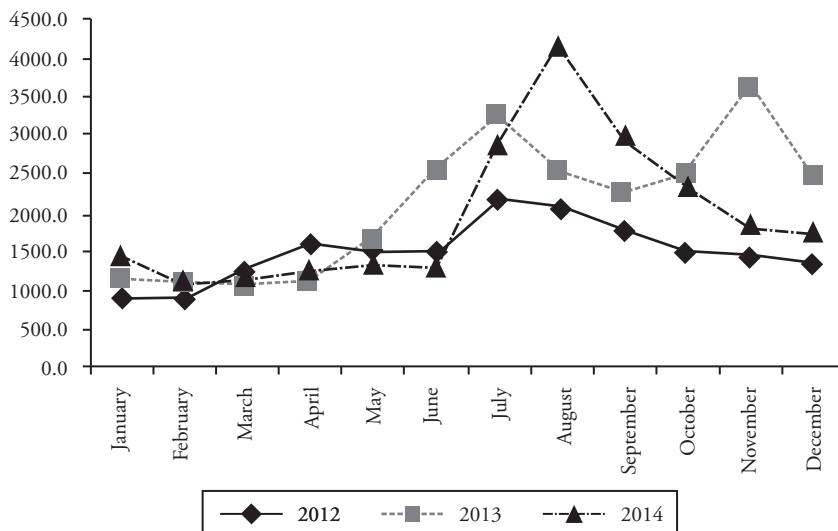

**Figure 2.7** All-India Average Monthly Wholesale Prices for Onion: Graph

Source: Based on the data of Table 8.7.

**Figure 2.8** All-India Average Monthly Wholesale Prices for Potato: Graph

Source: Based on the data of Table 8.9.

**Figure 2.9** All-India Average Monthly Wholesale Prices for Tomato: Graph

Source: Based on the data of Table 8.11.

the wholesale prices and arrivals are negatively related; in few cases this law was not followed apparently, may be because of arrivals from other origins (see Tables 8.4 to 8.7, 8.9, 8.11). The difference between retail and wholesale

prices reveals the margin of various intermediaries involved in the sale and purchase of potato, onion and tomato. This would also throw the light on the incidence of fiscal measures, such as taxes, freight rates and transportation.

### Infrastructure Availability

In India, because of imperfect coordination between supplies and demand, seasonality as well as perishable nature of horticultural crops, storage plays an important role in the marketing. A chain of cold storages are set up in different states of our country. Uttar Pradesh has the highest number of cold storages (2,176) followed by Punjab (606) and Gujarat (560) (see Table 11.6).

### Consumption

The nutritional intake from fruits and vegetables is higher among urban population than that of rural population. Along with the urbanization, people are likely to increase their calorie intake at a higher pace through fruits and vegetables—the increase in calorie intake is more than 10% in urban area whereas it is merely 1.89% in rural area over the period from 2004-05 to 2009-10. It is estimated that the per capita fruits availability in our country is less than 200 gm per day, which is far below the recommended quantity of 230 gm per capita per day (see Tables 12.1 and 12.2).<sup>1</sup>

### World Scenario

It is a matter of satisfaction, we are second largest producer of vegetables and fruits and our presence in global market is significant (see Table 13.1). The different types of fruits are exported to the outside world. Grapes occupies the premier position in exports with 107.3 thousand tonnes valued Rs 108,649 lakh (see Table 10.4.1). Other fruits which have attained significant position in exports are banana and mango. Exports of fresh vegetables (such as peas, potatoes) have been on the rise. However, export of fresh onion has declined from 17 to 12.4 lakh tonnes over the last three years (see Table 10.1.13).

The development achieved in the horticulture sector is indicative of the fact that there is growing demand for horticulture produce. The past experience have been rewarding for enhanced output from the investment. Availability of timely robust information in this sector will certainly improve the socioeconomic conditions of Indian citizens by providing self-reliance besides environmental protection.

## General Agricultural Information

**Table 6.1** Main Agro-climatic Regions / Zones\* of India

S. No.	Agro-climatic Regions/Zones	Major States
I	Western Himalayan Region	Himachal Pradesh, Jammu & Kashmir, Uttarakhand
II	Eastern Himalayan Region	Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, Tripura, West Bengal
III	Lower Gangetic Plain Region	West Bengal
IV	Middle Gangetic Plain Region	Uttar Pradesh, Bihar
V	Upper Gangetic Plain Region	Uttar Pradesh
VI	Trans Gangetic Plain Region	Chandigarh, Delhi, Haryana, Punjab, Rajasthan
VII	Eastern Plateau and Hills Region	Chhattisgarh, Jharkhand, Madhya Pradesh, Maharashtra, Odisha, West Bengal
VIII	Central Plateau and Hills Region	Madhya Pradesh, Rajasthan, Uttar Pradesh
IX	Western Plateau and Hills Region	Madhya Pradesh, Maharashtra
X	Southern Plateau and Hills Region	Andhra Pradesh, Karnataka, Tamil Nadu
XI	East Coast Plains and Hills Region	Andhra Pradesh, Odisha, Puducherry, Tamil Nadu
XII	West Coast Plains and Ghat Region	Goa, Karnataka, Kerala, Maharashtra, Tamil Nadu
XIII	Gujarat Plains and Hills Region	Gujarat, Dadra & Nagar Haveli, Daman & Diu
XIV	Western Dry Region	Rajasthan
XV	Island Region	Andaman & Nicobar Islands, Lakshadweep

Source: Khanna (1989), Planning Commission.

Note: \* There are 15 resource development regions in the country—14 in the main land and remaining one in the islands of Bay of Bengal and Arabian Sea.

Notes: (1) \* = Provisional, (2) # = In 2002-03 there was significant decline to gross area sown and net area sown due to decline in net area sown in the states of Andhra Pradesh, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Rajasthan, Tamil Nadu, West Bengal and Haryana. This was mainly due to deficient rainfall. (3) @ = In 2009-10, there was significant decline to gross area sown and net area sown due to decline in net area sown in the states of Andhra Pradesh, Bihar, Jharkhand, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. This was mainly due to deficient rainfall.

Source: Department of Fertilizers, Ministry of Chemicals & Fertilizers.

Notes: 1. Figures relate to imports made on government account only.

2. The imports made after decanalization of phosphatic fertilizers (w.e.f. 17 September 1992) and potassic fertilizers (w.e.f. 17 June 1993) include the quantities imported by private parties also.

\* There was no import of urea in 2000-01, 2002-03 and 2003-04 under Government Account.

## Sowing and Harvesting Schedules

Table 14.1 Sowing, Transplanting and Harvesting Timings of Onion in Different States in India

S. No.	Seasons	Time of Sowing Seed	Time of Transplanting	Time of Harvesting
<b>A.</b>	<b>Maharashtra and some parts of Gujarat</b>			
1.	Early Kharif	February–March	April–May	August–September
1.	Kharif	May–June	July–August	October–December
2.	Late Kharif	August–September	October–November	January–March
3.	Rabi	October–November	December–January	April–May
<b>B.</b>	<b>Tamil Nadu, Karnataka and Andhra Pradesh</b>			
1.	Early kharif	February–April	April–June	July–September
2.	Kharif	May–June	July–August	October–November
3.	Rabi	September–October	November–December	March–April
<b>C.</b>	<b>Rajasthan, Haryana, Punjab, Uttar Pradesh and Bihar</b>			
1.	Kharif	June–July	July–August	October–November
2.	Kharif	October–November	December–January	May–June
2.	Rabi			
<b>D.</b>	<b>West Bengal and Odisha</b>			
1.	Kharif	June–July	August–September	November–December
2.	Late kharif	August–September	October–December	February–March
3.	Rabi	September–October	November–December	March–April
<b>E.</b>	<b>Hills</b>			
1.	Rabi	September–October	October–November	June–July
2.	Summer (Long day type)	November–December	February–March	August–October

Table 14.2 Sowing and Harvesting Time of Potato in India

Plains	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr
Uttar Pradesh												
West Bengal												
Bihar												
Punjab												
Karnataka												

Hills	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
Uttarakhand and Himachal Pradesh								
Gujarat								

Source: DAC&FW.

Notes: Sowing  Harvesting 

- 85–90% of potato crop is raised in the winter season (Rabi).

- Rainy season (Kharif) potato production is taken in Karnataka, Maharashtra, Himachal Pradesh and Uttarakhand.
